Abstract

This is my very first article in L^AT_EX. I will thus try to keep this abstract short

An introductory material can come before the first section

1 L^AT_EX is so great

I love using L^AT_EX. That is the reason why this section is named this way.

2 Make the students understand it

There is simply no other way to write, or beam, science. May my students understand this after this class !

3 Conclusion

This is nearing to the end of the first part of this class dedicated to tools. Now is the time to practice, before going into more scientific details.
